CT SCAN

CECT scan of abdomen and pelvis:- The study reveal evidence of dilated appendix, measuring about 1.2cm in dilater, with mild periappendiceal fat stranding.

PROCEDURE

06/08/22- Laparoscopic appendectomy under general anaesthesia was done.

COURSE IN HOSPITAL

Patient Name : Mrs. VIMALA MISHRA

Admission No : IP2208001

Patient was admitted with complaints of right side lower abdomen pain with weakness since 1 month but worse symptoms since 4 days. General surgeon's opinion was taken and examination was done, which revealed that there was appendicitis. C.T. abdomen and pelvis were done which showed dilated appendix, measuring about 1.2cm in dilator, with mild periappendiceal fat stranding. Routine blood investigations were done which were normal. After a protocol based pre medical and pre anaesthetic checkup, patient was planned for surgery. On 06/08/22- Laproscopic appendectomy under general anaesthesia was done. Post op period was uneventful and patient is being refer to jamdar hospital due her personal reason in stable condition.
